

5/22/2023

Here are some updates on the Stage 1 progress; which we are tentatively looking to have completed in Late October 2023.

## Exterior Dining and Entrance Site Work

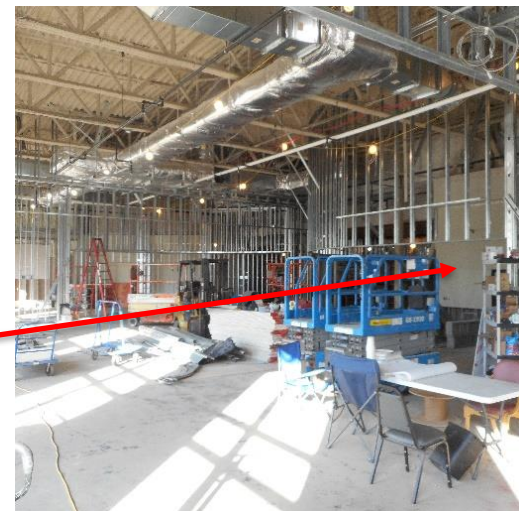

With the carport demolished, we've had the main entrance to Tower One opened for about two weeks. We are delighted to welcome everyone through our Main Entrance again.

As framing begins, you will start to see the size and the impact that our new entrance and Solarium will have on our community.

## Dining Space/Display Kitchen

These pictures don't do this area justice. Seeing the metal framing start to take shape really gives you a sense of how our new dining room will look.

What you are seeing here on the right is the outline of the Meat and Dairy Display Kitchens and to the left you're seeing the first set of private seating booths next to what will be our new dual sided fireplace.

Opposite the display kitchen is the lounge section of the dining room. You can get a sense of the fireplace size, based on the temporary piece of sheetrock pictured here.

### Upcoming Work

The focus will shift outside to assembling these steel beams to frame the Solarium.

We'll update everyone on that date, as we'll need to re-route traffic to accommodate for several large concrete truck and pumping trucks.

Inside, the framing the electrical will continue and once some of the machines have moved, we'll take some updated pictures that show the space. With so much work happening, there will be plenty to share. Progress, progress, progress!
